## Model 9500 Roll Pin Addition to 2<sup>nd</sup> Tank Adapter

Beginning November 24, 1997, we will produce 9500 valves with a change to the second tank adapter and the coupling retainer. A roll pin has been added to the tank adapter to prevent the adapter from accidentally being installed backwards. The coupling retainer has also been modified, orientating the adapter the correct way.

The new second tank adapter and coupling retainer are fully interchangeable with existing units in the field.

As always, thank you for using Fleck controls.

Sincerely,

Fleck Controls, Inc.
