## Lubricants

Occasionally we hear of problems with controls and parts resulting from the use of incorrect lubricants. We recommend the use of *only* Dow Corning Silicone Paste, which is available from Fleck.

The use of other types of lubricants may attack those components that are made of glass-filled Noryl. Improper lubricants can also attack a control's rubber components. Petroleum base lubricants can cause swelling of rubber parts.

If a lubricant is required, be certain that it is a silicone paste.

As always, thank you for using Fleck Controls.

Sincerely,

Fleck Controls, Inc.
