## Fleck Electronics and the Year 2000

Recently we have been asked about our Fleck made electronic timers/controls and their susceptibility to the time transition from 11:59 p.m., December 31<sup>st</sup>, 1999 to 12:00 midnight, January 1", 2000.

Basically, there are none.

All of Fleck electronic timers/controllers, which are the **SE, the 6600, the 6700**, the 3200ET (and any 3200E's that are in the field), the Systemax 2000, and the Systemax 2014, do not keep track of the date. They only keep track of the time of day. Therefore, the midnight transition into the year 2000 is meaningless to the controls and they will continue to function normally through out the transition and into the next millennia.

All customers' of Fleck need to take no action and should pass this information on to their customer's.

As always, thank you for using Fleck Controls.

Sincerely,

Fleck Controls
