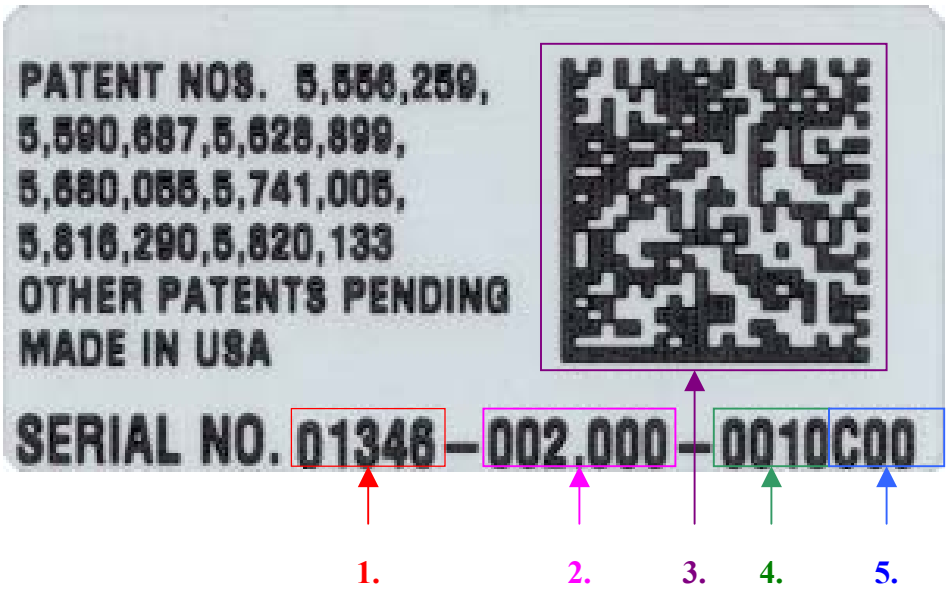
New Serial Number Labels

We recently made a change to our serial number label, which allows for more efficient and accurate product tracking. The new labels have been implemented on all valves.

This "smart" serial number allows our customer service representatives to quickly retrieve pertinent information about the product, such as build date and configuration data of the control valve.

Below is an example of the new label and meanings:



1.	Order Number	-This number (01346) we give to an order based on your P.O.
2.	Line Number	-This is the 2nd item purchased from your P.O.
3.	2 Dimensional Bar Code	-This will retrieve the configuration data with a scanner.
4.	Valve Number	-This is the 10th valve built out of total quantity ordered.
5.	Future Use	-This is for future use.

As always, thank you for using Fleck controls.

Sincerely,
Pentair Water Treatment
