## New SE Timer Option for 2850 and 9500 Control Valves

The SE timer is now available for the 2850 and 9500, offering an economical option for electronics. **S**implified **E**lectronics provide easy, step-by-step programming at the touch of a button. The same SE timer saves you time in installation, service, and training. Unlike other electronic valves, the SE timer performs without switching out cams or fumbling with jumpers, pins, and cryptic calculations.

### Features and Benefits:

- Bright **red** LED display
- NOVRAM Memory stores programming without batteries
- True Time of Day in Hours and Minutes
- Display Rotates Between Volume Remaining & Time of Day
- Show Regeneration Step and Cycle Time Remaining when in Regen.
- In Service and Program Indicator
- Flow Meter Indicator when Volume is Used
- Easy, Friendly Programming
- Quick and easy setup of Capacity, Regeneration Time, and Day Override
- Regeneration Tonight and Regenerate Now options

**Note:** When programming the meter pulses for a 1.5" paddle wheel meter, the setting will be 4 pulses and for the 1.5" turbine meter the setting will be 80 pulses. Enclosed is the new SE service manual, rev. C, part number 40608.

As always, thank you for using Fleck controls.

Sincerely,  
Pentair Water, Inc.
