## 3200ET Discontinued on Duplex Systems

In August, 2005, the 3200ET Timer will be replaced with the NT on control valves for duplex systems. These systems are incorporated into the 3200NT network control. The 3200ET will continue to be offered on 1000 Remote Meter and System 4 commercial valves. If you are quoting on projects or equipment beyond August, orders will need to be placed within 30 days.

The 3200 NT system uses on-board communications capabilities to link multiple valves via standard off-the-shelf telephone cables. They offer networks of up to four valves, simple on-site programming, and easy installation with plug-in wiring harnesses. They also offer remote start, remote lockout, and variable reserve.

The duplex systems that are affected are as follow:

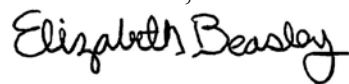

- System 5      Interlock
- System 6      Series
- System 7      Alternating

For additional information on the 3200NT control network, please refer to the following documents, available on [www.fleckcontrols.com](http://www.fleckcontrols.com).

- 3200NT Control Spec Sheet (Part #40823)
- 3200NT Service Manual (Part #41093)
- Performance Bulletin #415

As always, thank you for using Fleck Controls.

Sincerely,  
Pentair Water, Inc.
