## Changes to Service Manuals and Small Parts Kits

Effective August 2005, service manuals and programming inserts will be printed in-house, and will be placed in valve boxes separately from the small parts kits. This will allow us to print service manuals, inserts, and other literature quickly and efficiently, supplying our customers with the most current revision level with each order.

The three commercial service manuals that previously had separate programming inserts will have the inserts integrated as part of the manual.

The following three commercial service manuals will be affected:

<b>Part #</b>	<b>Manual</b>
41141	3200ET
41093	3200NT Timer
40608	SE Timer

The programming inserts for all residential service manuals will be printed in the same color (salmon) and will continue to be printed separately from the manual.

As always, thank you for using Fleck Controls.

Sincerely,  
Pentair Water, Inc.
