## ***3200NT Remote Option Available***

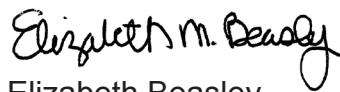

Beginning in September of 2006, a remote option will be available for the 3200NT timer. This will allow the user to mount the controller in more desirable locations for ease of use.

The remote option comes with an installed 25' cable which connects to any 2750, 2850, 2900, 3150, or 3900 valve via a 19-pin connector.

This option is useful for large tanks or tight locations where the controller would otherwise be hard to reach.

As always, thank you for using Fleck Controls.

Sincerely,  
Pentair Water, Inc.
