6600ET to be Updated with 6700XTR

Effective immediately, the 6600 electronic timer will be updated to the new improved 6700XTR.

Due to low usage, the 6600ET valve is being updated to the 6700XTR. Current inventory for the old version of the 6600ET has already been committed to customers and will no longer be available.

The new 6700XTR valve is an advanced version of the 6600ET. The 6700XTR offers the same great performance required of the 6600 valve by using the same valve body platform, but adds new advanced XTR electronics.

6700XTR Features & Benefits:

- Fully adjustable downflow or upflow regeneration cycle
- Multiple modes of operation
- Backwash capacity on tanks up to 12" diameter for softeners and 10" for filters
- Diagnostics
- Auxiliary Relay Output

All existing 6600ET's will continue to be serviced. If an existing 6600ET circuit board needs replacement and is under warranty, it will be replaced with a new 6700XTR powerhead.

For additional information, please contact your Pentair customer service representative.
