

# Performance Bulletin

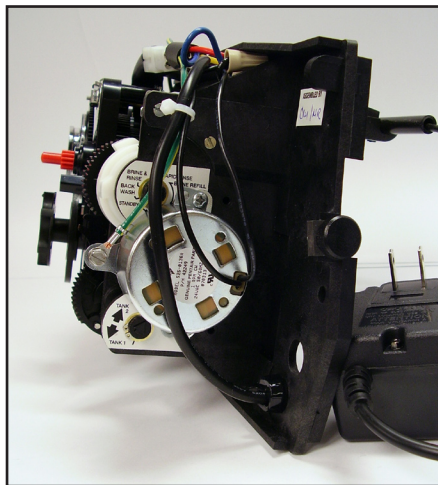

May 2007

## Motor Change for 9000, 9100, & 9500 Valves

Effective on May 14, 2007, there will be a new 24V motor for the 9000, 9100, and 9500 valves. The new motor will be 4 watt (the previous was 2.7 watt), and boasts an all-metal gear train. The label and grounding plate will change to facilitate the new motor. Additionally, an instruction sheet will be included with the service kit.

Currently we are in the process of updating the 120V and 220V motors on several different valve families. Please look for future performance bulletins for dates and availability.

Service Parts		
Old Part No.	New Part No.	New Description
18737	42249	Motor, 24V, 50/60 Hz, 1 RPM
