## Motor Changes for 9000, 9100, & 9500 Valves

Effective immediately as a running change, there will be new 120V and 220V motors for the 9000/9100/9500 valves. The new motors will be 4 watt (the previous ones were 2.7 watt), and boast all-metal gear trains. The labels and grounding plates will change to facilitate the new motors. Additionally, an instruction sheet will be included with the service kit.

Please see the following chart for the current motor replacement kits.

Conversion Kits	
Part No.	Voltage
61633-00	24V
61633-01	120V
61633-02	220V
