News Release

Structural® Introduces Encapsulated Tank Inlet Design

BROOKFIELD, WI – February 18, 2008 – Structural offers its new encapsulated inlet design on an expanded range of residential Poly Glass™ tank sizes.

Structural's latest improvement to its Poly Glass vessel line is a failsafe universal inlet, currently available on 14 popular tank sizes, according to Pentair product manager Joel Voytek. "The new Universal Inlet is a completely seamless way of connecting the valve to the tank. When you thread the valve into the sealing surface on the tank – the valve literally seals to the liner, eliminating the potential for leaks. We call it a universal seal because you can seal it radially or flat on the liner face."

A range of 14 Poly Glass vessels featuring the Universal Inlet are available immediately, with additional tank sizes launching over the course of 2008.

For more information on the new Universal Inlet or Structural Pressure Vessels in general, please contact Customer Service at 888.922.8265 or 440.286.4116.
